

Press Release

Launch of ID Platform FAP20 and ID Platform FAP30 multi-biometric tablets: COPPERNIC expands its range in the public security and identity sector.

Aix-en-Provence, 2nd July 2020 – Coppernic, the specialists in solutions for identity registration and authentication on behalf of governments, has now launched two new biometric tablets, expanding its range of products dedicated to this market. One year after the launch of the ID Platform FAP50 during the ID4Africa event in June 2019, Coppernic is today unveiling **the ID Platform FAP20 and ID Platform FAP30**, highlighting its position as a major player in the sector.

The two products provide optimum ease of use, guaranteeing a warm welcome from end users. The big 7-inch touch screen makes for an intuitive and user-friendly experience. The tablets are designed to meet the needs for authentication and checking in a range of areas, including KYC, elections, government programmes, mobile onsite access control, border controls, etc.

The two **ID Platforms FAP20 & FAP30** are an excellent addition to the existing range of products dedicated to biometric identification: the **C-One² e-ID**, a reference in professional biometric PDAs, and the **ID Platform FAP50**, a truly revolutionary tablet with a 4-4-2 fingerprint scanner for biometric registration.

These devices, equipped with powerful technological components, guarantee a unique performance based on the tried and tested **Android 9** operating system, a 1.8 GHz **OctaCore** processor and a **12,000 mAh battery** for intensive use in all conditions!

The two ID Platforms developed by Coppernic provide access to all aspects of biometrics thanks to identification modules with a fingerprint scan and facial and iris recognition technology. **One tablet, three possibilities for biometric recognition.**

The new devices feature Coppernic's cutting-edge skills and provide a powerful technological solution with a wide range of choices to meet users' needs. The **ID Platform FAP20** is ideal for all your identity-verification needs in **1:N**, while **the ID Platform FAP30** is perfect for authentication purposes in **1:1**, thanks to the accuracy of its biometric sensor.
